

Table 1. Periodically variable stars towards NGC 6822. We give the amplitude in the I-band (ΔI), period and absolute magnitude, dereddened colours, and I and V magnitudes. The error in the last digit of the period is given in parenthesis. An "e" accompanying the period means the stars is an eclipsing binary. Times for maxima (or main minima, in the case of eclipsing binaries) are also given. $e(HJD)$ means error in HJD and MA means "multiple aliases".

ID	alpha(2000)	dec(2000)	ΔI (mag)	P (days)	M_I	$(V - I)_0$	I	V	HJD	$e(HJD)$
