Supplementary material: The HI atlas

In this section we present the H I data products for all the detected galaxies. The H I atlas is displayed in two sections. The first (Figs. A1) presents the resolved galaxies, shown one per page. The second (Figs. A2) provides maps of the marginally resolved galaxies displayed three per page. The atlas contains total intensity maps, position-velocity diagrams, global H I profiles and UKIDSS or 2MASS counterpart images. For the resolved galaxies we also present H I velocity fields and radial H I surface density profiles.
