

The Hipparcos and Tycho Catalogues

ESA SP1200 June 1997

Volume 1

Clicking on a highlighted section will open the relevant PDF document.

[Contents listing and Foreword](#)

Volume 1:Part 1. The Hipparcos and Tycho Catalogues

[1.1 Introduction to the Hipparcos and Tycho Catalogues](#)

- 1.1.1 Overview of the Hipparcos Mission
- 1.1.2 Catalogues and Documentation before Satellite Launch
- 1.1.3 The Hipparcos and Tycho Catalogues and Products
- 1.1.4 How to Use the Hipparcos and Tycho Catalogues

[1.2 Astrometric Data](#)

- 1.2.1 The Astrometric Parameters Determined by Hipparcos
- 1.2.2 The Hipparcos Reference Frame
- 1.2.3 Time Scales
- 1.2.4 Fundamental Constants
- 1.2.5 Conventions for Angular Coordinates
- 1.2.6 Conventions for Epochs
- 1.2.7 Variance-Covariance Data and Correlations
- 1.2.8 The Standard Model of Stellar Motion
- 1.2.9 Use of Local Plane Coordinates

[1.3 Photometric Data, Magnitudes and Variability](#)

- 1.3.1 Hipparcos (Main Mission) Photometry: Single Stars
- 1.3.2 Hipparcos (Main Mission) Photometry: Double Stars
- 1.3.3 Tycho (Star Mapper) Photometry
- 1.3.4 Photometric Data from Ground-Based Observations
- 1.3.5 Published Data Related to the Hipparcos Photometry
- 1.3.6 Published Data Related to the Tycho Photometry
- Appendix 1: Statistical Indicators
- Appendix 2: Variability Indicators
- Appendix 3: Period Optimisation and Amplitude Estimation
- Appendix 4: Photometric Transformations
- Appendix 5: Determination of the V-I Colour Index

1.4 Double and Multiple Systems

- 1.4.1 Complications Arising from the Observations
- 1.4.2 Categorisation of Hipparcos Double Stars
- 1.4.3 Presentation of Double and Multiple Star Data
- 1.4.4 Hipparcos Catalogue Entries and Relationship to the CCDM
- 1.4.5 Statistics of Observed Double and Multiple Systems

1.5 Transformation of Astrometric Data and Associated Error Propagation

- 1.5.1 Introduction
- 1.5.2 General Error Propagation
- 1.5.3 Coordinate Transformations
- 1.5.4 Epoch Transformation: Simplified Treatment
- 1.5.5 Epoch Transformation: Rigorous Treatment
- 1.5.6 Calculation of Space Coordinates and Velocity
- 1.5.7 Relation to the J2000(FK5) Reference Frame

Volume 1: Part 2. Description of Catalogues and Annexes

2.1 Contents of the Hipparcos Catalogue

2.2 Contents of the Tycho Catalogue

2.3 Hipparcos Catalogue: Double and Multiple Systems Annex (DMSA)

- 2.3.1. Overview of the DMSA
- 2.3.2. DMSA/C:Component Solutions
- 2.3.3. DMSA/G:Acceleration Solutions
- 2.3.4. DMSA/O:Orbital Solutions
- 2.3.5. DMSA/V:VIM ('Variability-Induced Mover') Solutions
- 2.3.6. DMSA/X:Stochastic Solutions
- 2.3.7. The Machine-Readable DMSA

2.4 Hipparcos Catalogue: Variability Annex

2.5 Hipparcos Catalogue: Epoch Photometry Annex (and Extension)

2.6 Tycho Catalogue: Epoch Photometry Annex

2.7 Solar System Objects

2.8 Hipparcos Catalogue: Intermediate Astrometric Data

2.9 Hipparcos Catalogue: Transit Data

2.10 Identification Charts

2.11 Machine-Readable Files and CD-ROMs

2.11.1 Conventions for the ASCII CD-ROMs

2.11.2 Contents and Directory Structure for the ASCII CD-ROMs

2.11.3 Checksums for the Printed Catalogue

2.11.4 Celestia 2000

Volume 1: Part 3. Properties of the Catalogues

3.1. Statistical Properties: Introduction

3.2. Statistical Properties: The Hipparcos Catalogue

3.3. Statistical Properties: The Tycho Catalogue

3.4. Statistical Properties: Catalogue Comparisons

3.5. Statistical Properties: Astrophysical Relationships

3.6. Selected Stars from the Hipparcos Catalogue

Volume 1: Appendices
